

Centurion BioPharma Corporation Launches to Advance LADR™ Albumin Binding Ultra-High Potency Oncology Drug Candidates

Los Angeles – June 4, 2018 – Centurion BioPharma Corporation will focus on advancing albumin binding ultra-high potency LADR™ (Linker-Activated Drug Release) oncology drug candidates.

Centurion BioPharma’s LADR candidates, LADR-7, LADR-8, LADR-9, and LADR-10, were developed by its team of discovery scientists at its German laboratories and are eligible to advance into Investigational New Drug (IND)-enabling studies. Each of the candidates are rationally designed using Centurion BioPharma’s novel LADR™ technology, which enables drug compounds to be molecularly bound to albumin in the body’s bloodstream and controls its release at the tumor site. LADR™ maximizes tumor cell kill potential while minimizing systemic toxicity.

“The creation of Centurion BioPharma is a strategic endeavor that we believe will provide a vehicle to unlock the consolidated value of the LADR assets by enhancing our efforts to attract potential licensees in order to advance the pipeline of these albumin binding ultra-high potency LADR drug candidates,” said Eric L. Curtis, Chief Executive Officer and President of Centurion BioPharma Corporation.

The new research and development focused venture is expected to develop some drugs on its own while out-licensing other assets for larger patient populations.

About the LADR™ Technology Platform

The innovative LADR™ (Linker Activated Drug Release) technology employs a broad portfolio of novel linker molecules that selectively bind to circulating albumin and can be linked to a wide variety of anti-cancer payloads. Research efforts have centered on creating new molecules from the combination of ultra-high potency cytotoxic payloads with tunable linkers. The molecules currently being evaluated concentrate at the tumor site providing targeted delivery of the cell killing payloads.
